

Visited all 46 discovered charts with --filter, four workers, and a five-minute test budget per chart. No scan-wide deadline was imposed.

Recorded 6,515 test attempts in 7.2 minutes. Attempts include shrinking and repeated inputs; they are not counts of unique inputs or confirmed bugs.

Findings: 1 baseline-failed; 42 failed; 1 missing-values; 2 time-limit.

known-inputs: 41 failed; 1 generation-error; 2 time-limit.

robustness: 8 failed; 34 passed; 2 time-limit.

Observed failures include chart validation rejections, rendering failures, and possible tooling limitations. Inferred inputs are not an authoritative chart contract. Findings need triage before being called chart defects; time-limited coverage remains incomplete.

Checks: dependency build in isolated copies, Helm lint, Helm template with values-schema checks, and built-in manifest checks. External kubeconform/kubesecc validation was not configured.

Source: third_party/prometheus-community-helm-charts at 732bf3642c931946f1962fbd2e1b694ce8827e77; Helm 4.3.0. Per-worker dependency caches are isolated. Each primary chart has one dedicated job; nested results from parent jobs are retained separately and excluded from totals.

[Combined PDF](#) .

[Aggregate data](#)

[Raw logs and provenance](#)

Coverage notes: Alertmanager known-input generation could not expand the recursive schema at config.route.routes[*]; its deferred robustness phase still ran. Prometheus PostgreSQL Exporter failed baseline lint because datasource password configuration was not supplied. The nested CRD chart lacks values.yaml. Kube-Prometheus Stack and Prometheus Operator CRDs reached their test budgets.

Directory: third_party/prometheus-community-helm-charts

Started (Unix epoch): 1789263973

Elapsed (wall clock): 434.00 seconds

Charts discovered: 46

Scan status: completed

Discovery complete: True

Unstarted charts: 0

Results describe the tested sample; they do not prove chart correctness.

Baseline-only, skipped, blocked, and incomplete charts are not property-test passes.

Status counts

1 baseline-failed; 42 failed; 1 missing-values; 2 time-limit.

Settings

Filtering: True | Seed: 0 | Traversal: not recorded

Chart timeout: 300.0 seconds | Workers: 4

Complete settings are retained in the JSON report.

Errors

45 distinct diagnostics across 53 occurrences; 8 repeats grouped.

Diagnostics and their triggering inputs are grouped under each chart below.

Up to two examples per diagnostic and six fields per example are shown. Long values and diagnostics are shortened.

Full inputs, diagnostics, and remaining cases are retained in JSON and linked artifacts.

Selected fields identify what the test varied, not an independently proven cause.
